DETAILED ACTION

Page 2

1. The indicated allowability of claims is withdrawn in view of the newly discovered reference(s) to Chmielewski, (WO '405). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 7-12, 15, 18-20, 26-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pataille in view of WO 01/98405 (WO '405).

Pataille discloses a seal assembly comprising a ring radially extending to slidably engage a shaft. The seal has a length greater than the thickness and has a flat bearing surface in that segment 3 is flat with a spiral groove. Pataille does not appear to disclose the material having the claimed properties. WO '405 teaches an improved sealing material that exhibits desirable properties for a wide range of environments (e.g. see second paragraph on page 1). WO '405 teaches the material has the claimed Shore A hardness, tensile strength, modulus, and elongation at break (see table on page 12, has values that fall in claimed ranges). The material is a noncontinuous phase vulcanized fluorocarbon elastomer dispersed in a continuous phase matrix comprising a thermoplastic material (see abstract). Regarding claims 1-3, 7-12, 15, 18-20, 26, and 27, since WO '405 discloses a material having the required materials and properties, it is submitted the material would also have the claimed tan-delta and loss to storage ratio.

Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the seal of Pataille with the material taught by WO '405 to improve the seals performance and use.

4. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pataille in view of WO '405 as applied to claim 18 above, and further in view of Johnston.

Johnston teaches art equivalent shapes including a smooth outer surface or bead. It would have been obvious for one of ordinary skill in the art at the time the invention was made to make the seal with a bead as such is an art equivalent.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alison K. Pickard whose telephone number is 571-272-7062. The examiner can normally be reached on M-F (10-7:30), with alternate Friday's off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tricia Engle can be reached on 571-272-6660. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
